- Concrete cooling
- Liquid Nitrogen dosing
- Modified Atmosphere Packaging (MAP)
- Cryogenic food freezing and chilling
- Cold transportation
- Cleaning with dry ice blasting

With six core gas applications providing a vast range of manufacturing and process improvements to industries such as oil and gas, construction, food and beverage and aerospace, we provide analysis, design, trials, and installation, supporting you from application inception through to when you see the results!

Our techniques can improve quality, rate of production, time and cost efficiencies, environmental issues and distribution capabilities.
